

ColdFlex™

Flexible Rubber Graphite

**No breakage in handling
- GUARANTEED.**

A **FLEXIBLE** graphite suction roll seal specifically designed for the most demanding suction roll applications

ColdFlex™ seals will typically run longer than harder seal materials because they greatly reduce the thermal bow into the shell that occurs with stiffer seal materials from dry contact with the shell.

ColdFlex™ also solves the brittleness and breakage problems associated with rubber-graphite seals. When combined with our G-TEC™ end deckle material, all suction roll seal breakage issues are solved once and for all without risk of damage to the shell.

Other features include:

- Generates low noise and will wear-in quickly
- Has a low coefficient of friction for low power consumption
- Can have 2-year run times with our custom fitting program
- No breakage in handling guaranteed
