

SUPER Silencer™

Custom Engineered NOISE REDUCTION for Quiet and Efficient Suction Rolls.

- Suction roll noise is often a sign of inefficient operation.
- Noise often results from the residual vacuum in the suction roll shell being released too quickly.
- Coldwater can custom engineer silencer shapes to create a more gradual pressure change.
- Reductions of over 15 db are possible.
- Many installations in service today.

There is no "one size fits all" solution. Each case has to be evaluated to match the drill pattern in the shell.

Combined with our "Efficiency Inspection" service, roll change intervals can be greatly extended and seal life improved.
